Welcome to Replica!

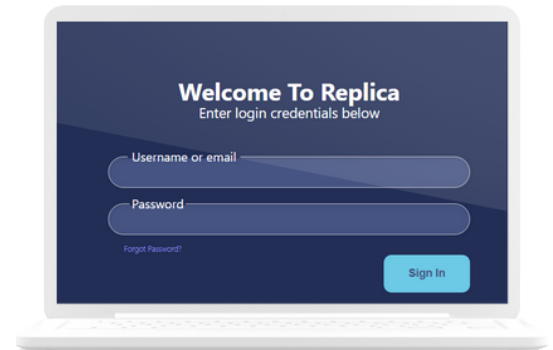

Instant. Secure. Frictionless.

Replica provides Secure Environments-as-a-Service, enabling teams to conduct high-risk activities, such as malware analysis, sensitive research, and collaboration, without exposure to external threats. With instant deployment and full isolation, your work remains protected.

Logging In

Upon your initial log-in, you will be prompted to accept the terms of service and change your default password. If you forget your password, follow the password recovery process on the login page.

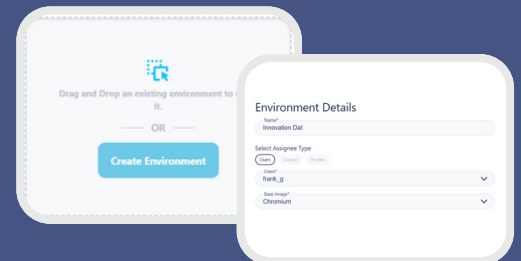

Creating a Secure Environment

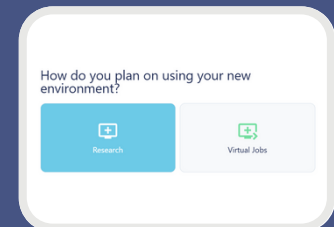

Create Your Virtual Environment (VE)

Upon logging in to the Replica platform, click on “Create” in the primary workspace. Use a unique environment name for easy identification. Assign the VE to a group to ensure seamless collaboration.

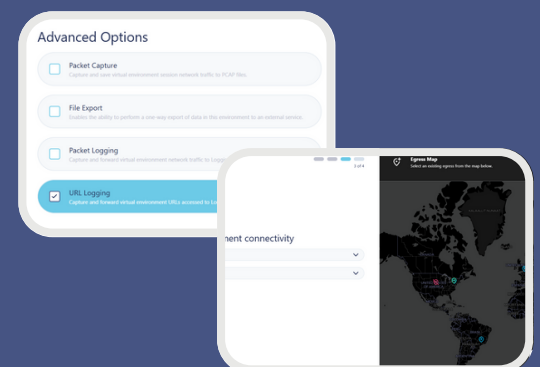

Select Primary Objective for Your Environment

Walk through system-guided prompts to select configuration settings for your environment – including the appropriate Replica Image and Egress.

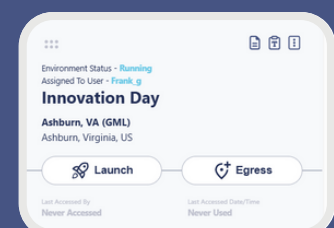

Choose Optional Advanced Settings

- URL Logging – To capture and extract URL data from network packets, select the “URL logging.”
- Packet Capture – To capture and save all Virtual Environment network packets to PCAP files, enable the “packet capture” option.
- File Export – exfil data to pre-configured 3rd party storage services.

Launch Environment

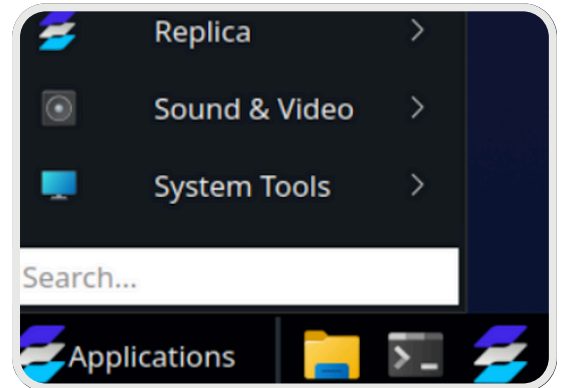

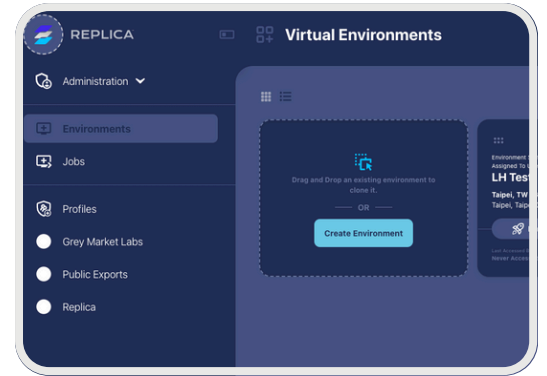

Select launch to open the environment you just created.

Using Your Environments

Now that you have created a virtual environment, let's use it!

- ✓ Select the applications icon in the lower left to get your menu.
- ✓ Open your browser under Internet.
- ✓ Choose allow in the URL bar if you want to share a clipboard on your machine.
- ✓ Each VE defaults to language matching the egress location. Administrators can change this setting.
- ✓ The toolbox has other features for VEs, including Butler access, egress swapping, and telephony. Not all features may be enabled for your organization.

Managing Your Secure Environments

Replica's Web Dashboard

- **Monitor Status** – View active and idle environments and jobs.
- **Modify Settings** – Adjust permissions, network configurations, or storage policies.
- **Clone Environments** – Instantly duplicate setups for parallel investigations.
- **Switch Between Sessions** – Seamlessly move between different secure workspaces.

Leverage Replica Profiles

- **Unified Profiles** – Group multiple virtual environments by persona, area, or project to streamline operations
- **Network Control** – Set fixed access points for consistent attribution
